

Flow Tubes (Protection Tubes)

These tubes are made of quartz materials and are to be used for filtering UV light ranging from 190 to 330nm. They are widely used in environmental-conservation lighting source and solid-state lasers, especially in laser pump chambers.

Standard tubes:

OD* (mm)	Thickness	ID** (mm)	Length
8	0.9±0.1	=OD - 2 x thickness	On request
10	1.0±0.1	=OD - 2 x thickness	On request
12	1.1±0.1	=OD - 2 x thickness	On request
14	1.1±0.1	=OD - 2 x thickness	On request
16	1.3±0.3	=OD - 2 x thickness	On request

* tolerance of OD (outside diameter) is +/-0.2mm

** ID (inner diameter)

If you want to custom-make the flow tubes, please tell us the outside diameter, length & quantity.
